

2016 Aptoide Summer Internship - Weekly Report 7 [August 22 – August 26]

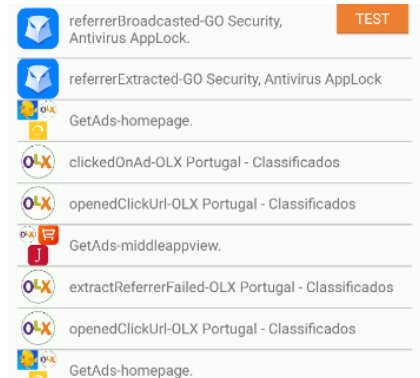

Project: Aptoide Ad Monitor

Trainee: Dária Baikova

Mentors: Frederico Santinho & Diogo Carvalho

Completed tasks during the week:

- Working on the user interface:
 - Detail Activity:
 - Creating new fragments
 - Implementing a Collapsing toolbar layout (Detail View header)
 - Implementing new logic to support the new view (using LinkedHashMaps)
 - Implementing a new RecyclerView to display the occurred actions of a flow (cpc, cpd, cpi, referrer extraction & broadcast, conversion);
 - Main Activity:
 - Displaying app icons on the action list
 - Implementing new logic for the icon display
 - Creating new View Holders to support the display of multiple icons for the getAds action (the number of displayed icons depends on the number of ads in the getAdsResponse);
- Testing & fixing bugs
- Refactoring code;

Goals for next week:

- Implement a new view to display the ads contained in a getAdsResponse
- Finish the chat head notifications view
- Fix possible bugs
- Start working on the final presentation;
