

2017 Aptoide Summer Internship

Weekly Report 4 [July 31 – August 4]

Project: Bitcoin Project

Trainee: José Messejana

Mentor: Marcelo Benites

Completed Tasks during Week 4

- Little research on how the OAuth works.
- Cycle of the buy process understood after simulating the process of opening a webview, go to the redirect URL and validate the transaction, by creating all the necessary classes and methods for that.
- Minor tweaks to start the real implementation (HashMap to save transactions, removed all logs done on simulation).

What I'll be doing next week

- Implementing Bitcoin payment, through Coinbase SDK.
