2017 Aptoide Summer Internship

Weekly Report 7 [August 21 – August 25]

Project: Bitcoin Project
Trainee: José Messejana
Mentor: Marcelo Benites

Completed Tasks during Week 7

- Found a bug when trying to buy more than 1 app, while the other one wasn't finished yet. Fixed it and made a few tweaks on how the app deals with leaving the payment fragment when the transaction is not finished yet.
- Payment flow now works without the need to generate another token, if there's one already.
- Found the problem with the authorization button not working when asked for sending permissions.
- Refactored Codes.
- More testing, 2 bugs showed up. 1 in which the coinbase fragment is already with the account logged in after the first time. Tried to clear cache, form data, etc… and tried to revoke token after each transaction and didn't work. Another in which some versions of Android request a certificate.
- Refactored code and made it easy to switch up between the transaction with bitcoins and the transaction simulator.

What I'll be doing next week

- Making sure that the Webview requests the user email and password after token has been revoked (when user logs out).
- Trying to solve Certifcate request on some Android versions.
- Working on the presentation.
