

Project: Office Suite Signature Plug-in.

Developer: João Amado

Current Project Stage: 4 Final (Check this [link](#) for project details and road-map reference)

Week: 7, from August 21st to August 25th.

Summary

This report concerns the working week from 21 of August to 25 of August.

This week, the focus of the work was in creating an MSI file to provide the end user with a simple way to install the MSOffice plugin. This file should take in consideration the plugin's dependencies and inform the user if any additional tools are required to run it properly. The MSI was successfully implemented and tested in the developer's computer.

Some implementation details were improved and further tested on both plugins.

This week, the progress regarding the testing of the plugins was slow due to my mentor's unavailability. Next week, the plugins will be tested and its performance evaluated by my mentor, André,

To summarize, the project's objectives were met, but further testing in different machines is still needed.

TO-DO Next Week

- Test both plugins in different machines (32 bit and 64 bit OS's).
- Review the plugin's functionalities with my mentor, and conduct any tests he deems necessary.
- Fix any implementation errors found on both plugins.
