

## **Final Considerations**

By the end of the internship, the project's objectives set on the first week were accomplished with success. The plugins for LibreOffice and MSOffice were developed according to the my mentor's specifications and are both working properly. These plugins, as well as the MSI installer for the MSOffice plugin, were successfully tested in both 32 bit and 64 bit machines and worked as expected in each scenario. Despite this, I would not consider the project to be a complet success due to the fact that the pom.xml file for packaging the Java LO plugin code using the Maven build tool, is generating a file that is not recognized by LO as valid extension. In order to generate a valid extension file from the Java source code, one would need to use the LOEclipse Eclipse IDE extension.

On a more personal note, I had and enjoyable experience working on this project and I found it an excellent opportunity to build upon my existing programming knowledge. Also, it was a good way to get acquainted with a professional company environment and an invaluable work experience.

I finish this internship with gratitude and hoping I have contributed in a meaningfull way to help Caixa Mágica reach it's desired goals and objectives.
